exp.o® ISF

We have developed exp.o ISF as a web based tool to assist importers with compliance requirements for the U.S. Customs Importer Security Filing (10+2). This allows Importers to create a collaborative process between themselves and their trading partners. It also allows them to gather the best data from the most reliable source so that they can meet timing and reporting requirements and minimize disruption to their supply chain.

Automated and Efficient

The importer can customize exp.o ISF to complete their filings via EDI using standard business data available in the company's enterprise data systems, via spreadsheet upload, or through manual data entry.

Through exp.o ISF, the importer can grant their vendors and suppliers secure access to their security filings and assign them data input responsibilities. The application provides workflow functionality to assist importers, vendors, and suppliers to meet their responsibilities and manage their work queue. When the security filing cutoff day approaches, exp.o ISF automatically edits the data for formatting accuracy and completeness.

Additionally, our web based tool applies business rules configured by the importer to fill missing data elements and if necessary, sends a notification to the appropriate party letting them know there is still work for them to do to complete the filing. When all data is available, exp.o ISF transmits the information to U.S. Customs.

Web Based Tool Functionality

- Gathers data from multiple sources at origin and destination
- Manages timing and milestones
- Utilizes the importer's product database
- Integrated address book
- Receives, transmits, and validates data
- Transmits data to Customs via ABI
- Ensures your sensitive data is secure and confidential
- Complete reporting to measure timing and compliance
- Fully EDI capable - allows for complete automation of filings

You're Linked In

- Standardized formats for EDI 850/856/810
- Custom coding to proprietary formats available
- Integrated with Expeditors' Order Management Booking Tool
- Integrated with Expeditors' exp.o Track and Trace
- Integrated with Tradeflow® Product Management Center

Contact your local Expeditors representative for further information on the Importer Security Filing requirements and exp.o ISF.
