

# Elevate Your LCL Strategy in North Asia

Rising transportation costs and increasing pressures to plan inventory more flexibly lead to schedule challenges, making it harder to meet expectations and manage supply chains efficiently.

With our LCL Express Platinum service, our teams assist with planning and executing a strategy to move cargo out of North Asia hubs such as China/Hong Kong, Taiwan, South Korea, and Japan to the United States. You'll benefit from faster transit times, greater reliability, and cost efficiency compared to traditional LCL and air freight.

## Transit Times from Asia to the United States

**Traditional LCL:** 32 to 40 Days

**LCX Platinum Shanghai:** 11 to 22 Days

**LCX Platinum Ningbo:** 19 to 22 Days

**LCX Platinum Shenzhen:** 21 to 28 Days

## LCL Express Platinum Benefits

- **Controlled Consol Boxes:** Enhanced security, compliance, and schedule integrity.
- **End-to-End Coordination:** Seamless movement from origin to final delivery at any location across the U.S.
- **Proactive Visibility:** Digital tracking, milestone updates, and responsive communication.
- **Weekly Fixed Schedules:** Cargo moves out of North Asia every week, ensuring consistent scheduling and faster turnover.
- **Scalable Solutions:** Partial loads with value-added services like bonded transfers and last-mile delivery.
- **Container Freight Stations (CFS):** Competitive pricing and improved transit consistency through our Container Freight Station network optimization.

## Reducing Emissions

Our North Asia team is committed to reducing emissions while optimizing your supply chain. By shortening transportation distances, shifting to more efficient modes, and consolidating freight, we help you make smarter decisions that lower costs and minimize your carbon footprint.

To further reduce environmental impact, we support the movement of LCL cargo using electric vehicles (EVs) for inland transportation. This approach not only cuts greenhouse gas emissions but also enhances energy efficiency, ensuring your cargo moves sustainably from origin to final destination.
